

YIELD FOR FARMER,
QUALITY FOR PROCESSOR

N139262

HYBRID INFORMATION GUIDE

AGRONOMIC QUALITIES

Relative Maturity Days: 73 days to 50% silk
2475 GDD

Plant Height: 7 to 7.5 foot average

Population Recommendation: 28,000 to 32,000 final
Stand. Very good flex and DE under low pop

Ear Type: Flex type very girthy ear. More uniform
from butt to tip. Good husk coverage on tip

Fungal Leaf Diseases: average tolerance
Bacterial Leaf Blight: average tolerance
Bacterial Stalk Rots: average tolerance

Yield Potential: 6,500 to 8,500 lbs per acre: Zone 3
5,000 to 7,000 lbs. per acre Zones 1 and 2

POPPING QUALITIES

Seeds per 10 grams: 58 to 64

Oil Expansion: 43 to 47 mwvt

% Ball/Mushroom in Oil: 0%

Taste Score: 3.5

Hull Score: 3.5

Kernel Shape: 2.0 more flat with round top kernel

Hot air expansion:

% Ball/Mushroom in Air:

Microwave Testing 1,000 Watts:

Average Grams unpopped kernels:

Expansion Average:

Range (Grams) of high to low unpopped kernels:

Hybrid Notes: This hybrid has very high yield potential. We recommend this for zones 1 and 2 due to the longer dry down. The ear does not flex as much as it will put on more rows. We've seen ears with 26 rows. Expansion is better than 11262. Also expressed the ability in 2012 to yield and pollinate under very hot conditions. Recommend keeping populations 32,000 or less under irrigation and 26,000 or less under dry land to help stalk quality.

Growing Zone Recommendations: Zones 1, 2 and 3
